Future Pool Owner,

I am a Realtor in Charlotte and to me my home is a reflection of my love for houses and how they are that little part of the world you can call your own. I tell people to enjoy where they live. Make the most use you can of every square inch of the lot. I am a big fan of the beauty of swimming pools. When showing homes, I often tell people that a pool would look great in this yard and how it can work for them. In Charlotte, our weather is good enough that you can really take advantage of the outdoors year round.

I had no intention of building a pool when we started to do a remodel and addition project. My contractor looked at me and said a pool would look good right there while pointing to an almost barren strip of grass. So began our love of pools.

I can't tell you all the wonderful things about Pool By Design. Tommy, Simon, Jo and all the contractors were great to work with in building our pool. Our construction job was probably a bit different than most. We added a separate garage and an extensive patio all in a very small area. Home sites just aren't that big in Ballantyne. Just so happened we were dropping a pool in the middle of all of that! The first phase involved digging the pool and creating the base shell. Then our contractors came in and built the garage and patio. 7 months later Pool by Design came back to finish their work. We were a bit hesitant about what we wanted to do with the pool decking. We told Simon what our thoughts were and the team was able to create a distinct look with concrete that made it look as though the pool had been there forever. Beautiful!

That was in 2006 / 2007. Since then we have had no issues with the pool except for an occasional bulb burning out, but that has been about it. The back of our house looks out at the pool. We have never covered in the winter so that we can enjoy it every day.

If you are interested in building a pool, come by my house and take a look! You'll quickly learn that I am a big fan of Pool by Design and if I ever build another, they will definitely do the job.
